Densitometer Model DT-92

The Densitometer DT-92 is a digital measuring instrument serving to determine the photometric density of X-ray films.

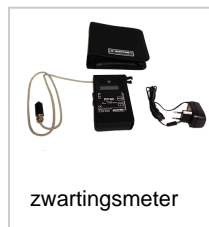

The device consists of a digital tester with a separate probe. In the Densitometer all change, functions, and strengthen intervals are built in. The DT-92 is equipped with a rechargeable Ni-Cd battery. This battery provides power to the entire unit. The device can also be connected to the mains.

The unit comes complete with sensor, battery, charger and bag.

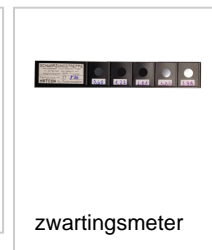

Into the slot on the side of the instrument can be an optional density strip been pushed.
